

EM 4 1/2" Seamless Fascia Gutter Machine

The EM 4 1/2-inch Seamless Fascia Gutter Machine will quickly become a staple for your business for gutter jobs that do not have fascia installed and need a wider trough (4 1/2-inch fascia gutter is commonly used with 2" x 4" trusses). This fascia gutter machine features unique and fully-driven forming stations that are enclosed behind a steel cover, protecting the operator and keeping the roll-former free of debris. It is completely enclosed and has removable side panels for serviceability. All bearings are factory-sealed. The EM 4 1/2-inch Seamless Fascia Gutter Machine is constructed of heavy gauge steel and driven by a powerful 1.5HP, 110-volt single-phase motor. This machine is powder-coated inside and out with a heavy-duty industrial paint finish and features industrial nitrocarburized (QPQ) steel rollers, allowing for improved wear, lubricity, strength, and corrosion resistance.

4 1/2-INCH PROFILE *(included with the machine)*

► FEATURES

- 4 1/2 in. fascia gutter profile
- Steel constructed frame
- Industrial nitrocarburized rollers
- Fully driven forming stations
- Factory-sealed bearings
- Unique forming process
- Enclosed forming
