

EM 4½" FASCIA GUTTER

Seamless Gutter Machine

The EM 4½" Fascia Gutter Machine will quickly become a staple for your business for those gutter jobs that do not have fascia installed and need a wider trough; 4½" fascia gutter is commonly used with 2x4 trusses. Our 4½" fascia gutter machine features unique and fully driven forming stations that are enclosed with a steel cover to protect the operators and keep the roll-former free and clear of debris. All bearings are factory-sealed. Eastside fascia gutter machines are driven by a powerful 1.5HP, 110-volt single phase motor and are constructed of heavy gauge steel. The EM 4½" Fascia Gutter machine is completely enclosed, and has removable side panels for serviceability. The machine is powder-coated inside and out with a heavy-duty industrial paint finish for protection and features industrial nitrocarburized (QPQ) steel rollers. Nitrocarburizing rollers allow for improved wear, lubricity, strength and corrosion resistance.
